

HOW ARE YOU MANAGING YOUR CLINICAL COMMUNICATIONS TODAY?

The Ergonomic Group partners with Zebra to Centralize Employee Communications with Clinical Mobility Solutions.

It can be challenging for your entire care team to communicate seamlessly across departments and functions, when your staff is constantly on the go. Instant, secure communication is critical. It is also possible with unified, enterprise communication solutions from Zebra.

How it Works

1. Staff securely access their designated mobile computer and secure designated profile at start of shift.
2. Nurses complete tasks at point-of-care, documenting in real time on mobile computer or on desktop display using Workstation Connect.
3. IT staff remotely visualizes device use and manages uptime requirements.
4. Mobile clinicians call care team members or alert staff of priority situation with the touch of a button using Zebra Workcloud Communication Software.

Results You Can Expect

- Instantly and securely talk, text and share images.
- Cut patient waiting time with faster processes and communication.
- Cut medical test response time with results on mobile devices.
- Increase barcode medication administration (BCMA) compliance rates.
- Automatically notify nurses on mobile devices.
- Streamline workflows for more time with patients.
